

ABSTRACT

An apparatus for automatic sleeve loading on a device testing apparatus is provided which automatically aligns and loads sleeves with devices held therein on a device testing apparatus for carrying out a device test. The apparatus includes a sloped loading plate for putting sleeves of devices thereon, vertical fixation plates positioned at both sides of the sloped loading plate, a carrier device adjacent to a lower edge of the sloped loading plate for receiving sleeves from the lower edge of the sloped loading plate and transporting them to a loading part of the device testing apparatus, a driving device fitted to the fixation plate for driving the carrier device, and a return device for returning a plurality of sleeves back to the sloped loading plate when a plurality of sleeves are loaded on and transported by one step, leaving only one of the sleeves on the step.
